- Evaluation facilitation
- Facilitation of post-evaluation bidder reviews
- Facilitation of Bidders' debriefs
- Audit and protest support

❖ Product Training

- Customers
- Service Providers
- Train-the-Trainers

Founded in 1992, ASC is a U.S.-based company with customers in the U.S., Canada, Australia and the UK.

ASC products encourage collaboration between customers and contractors, reducing tension and improving performance. ASC software improves all facets of the contract life-cycle from pricing and partnering to quality of services delivered.

We understand the life-cycle of a long and complex outsource, having provided support for all parts of the procurement lifecycle. ASC knows that to be successful, all the pieces have to fit together with no replication of effort as you move from one step to the next. We have developed two software products, TF!™ and SeeSOR™, to support this philosophy and continue to work with great customers by constantly improving our products to meet their changing needs.

The ASC Procurement Objective

“We strive to bring customers and service providers together in a collaborative process to ensure customers receive best value while service providers deliver to unambiguous expectations.”

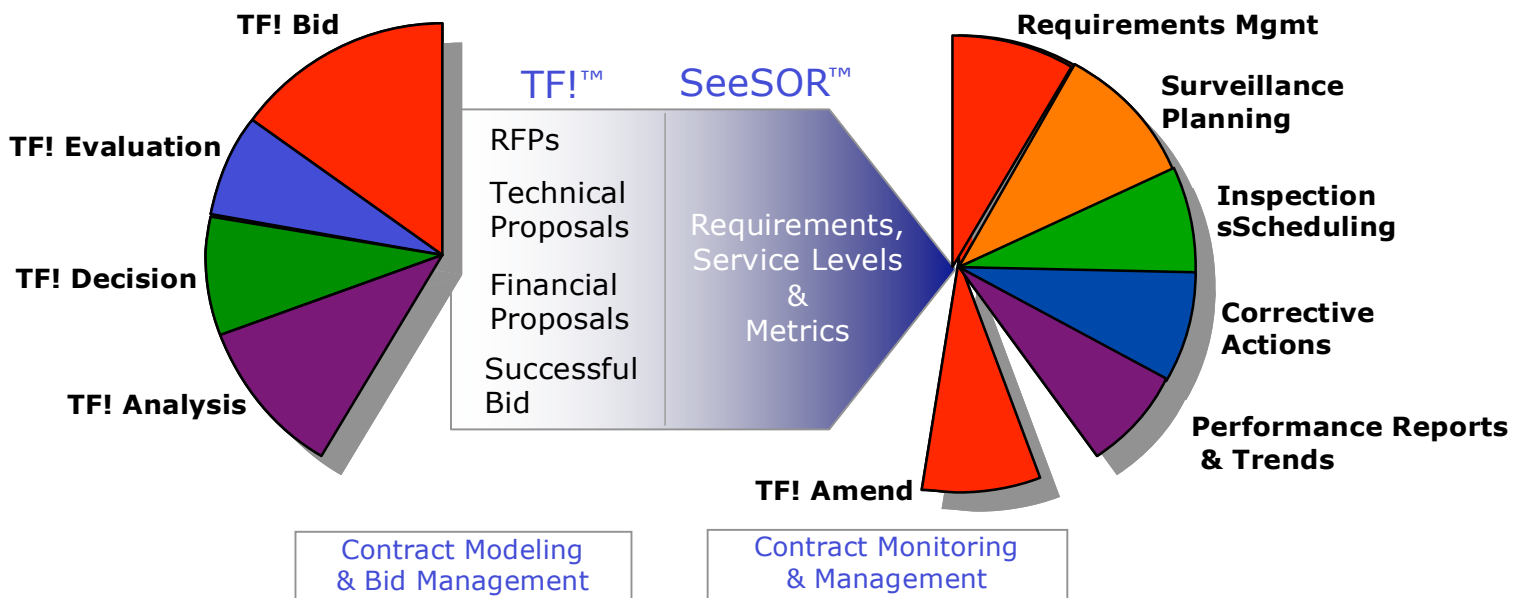

ASC Group

The Experience & Tools to Optimize Service Contracts

Experience and Depth of Knowledge

Experience, depth of knowledge, innovative developers of new and improved process, procedures, and tools - ASC brings unparalleled value to procurement strategy, design, or support needs.

ASC employees and licensed affiliates have been providing procurement process support to private and public sector organizations for over 20 years. Our experience gained from providing support to both sides of the equation - the outsourcing organization and bidders - gives ASC a unique understanding of procurement processes and methodologies to create a high level of communication and collaboration between client and bidders to optimize the result of service contracts.

ASC – The Path to Best Value

Unique to ASC is that our TF! and SeeSOR products have evolved from direct experience in providing support at every phase of the contract cycle, from technical requirements design through to contract re-let. Whether a customer is using another tool or TF! and/or SeeSOR, ASC has the depth of experience to provide targeted and meaningful advice.

While TF! or SeeSOR may operate standalone, we have developed both tools to work together to support the data and process compatibility and integration that makes the Procurement Objective a reality. The requirements, service levels and metrics defined at the bid process can be directly input from TF! to SeeSOR. This creates a seamless procurement life-cycle from requirements through to contract management - or from SeeSOR to TF! - when it is time to re-compete your project.
